Benchmarking Tooling (BETA)

📄 Copy page ▼

Run repeatable agent evaluations.

Currently in beta, our Benchmarking Agent will be the standard way to measure AI performance across model providers.

ARC Harness `arcagi3`

This is a developer harness for building and benchmarking agentic research workflows on the **ARC-AGI-3** corpus of environments.

When to use it

- Compare model versions or prompt strategies on the same game set.
- Detect regressions after code or prompt changes.
- Generate official scorecards and replays for sharing.
- Experimenting with multiple custom agentic architectures.

Quickstart

Prerequisites

- **Python:** 3.9+
- **uv:** recommended package manager. Install from [uv.pm](https://astral.sh/uv/install.sh) or `curl -LsSf https://astral.sh/uv/install.sh | sh`
- **ARC-AGI-3 API key:** required to talk to the ARC server. Sign up for a key [here](#)

>

```
cd arc-agi-3-benchmarking
```

From repo root:

```
uv venv
uv sync
```

This creates a virtual environment (if needed) and installs the project and dependencies in editable mode.

Alternatively, without `uv` :

```
pip install -e .
```

Setting up your environment

Set the ARC API key and your provider keys. You can put them in a `.env` file (see [.env.example](#)) or export them in your shell.

Provider key links:

- [OpenAI](#)
- [Anthropic](#)
- [Google Gemini](#)
- [OpenRouter](#)
- [Fireworks](#)
- [Groq](#)
- [DeepSeek](#)
- [Hugging Face](#)

>

Select your game

```
uv run python -m arcagi3.runner --list-games
```

Pick your model

```
uv run python -m arcagi3.runner --list-models
```

Benchmark

```
uv run python -m arcagi3.runner \  
  --game_id ls20 \  
  --config gpt-5-2-openrouter \  
  --max_actions 3
```

Scorecards

When you run a benchmark, a scorecard is saved on the ARC server. If you are logged in, you can view them at arcprize.org/scorecards.

Learn More

The [benchmarking README](#) has more information than what is published here. Be sure to also reference how to [create your own agent](#) to start experimenting with new agentic architectures.
